

SOFTWARE TO ENCOURAGE POSITIVE ORAL HEALTH BEHAVIOUR IN CHILDREN

Hello Pearl, a global leader in AI-powered dental diagnostics, has introduced Second Opinion for Kids, a paediatric-focused version of its clinically validated AI-assisted radiologic detection platform designed to enhance patient communication, improve engagement and support earlier intervention in children's oral healthcare.

Building on the existing paediatric capabilities of the Second Opinion platform, the new software analyses dental radiographs in real time to identify radiographic findings consistent with dental pathology, including early carious lesions. While maintaining the platform's established AI-driven diagnostic support, Second Opinion for Kids incorporates child-friendly visual overlays using animated 'Sugar Bugs' characters to help clinicians communicate radiographic findings in a way that is accessible to younger patients.

The platform has been developed to address one of paediatric dentistry's ongoing challenges: effectively communicating clinical

findings to children while reducing dental anxiety and improving cooperation during examination and treatment planning. By presenting radiographic findings in an engaging and age-appropriate format, the software aims to facilitate shared understanding between clinicians, children and their parents or carers.

Second Opinion for Kids represents a further evolution

of Hello Pearl's AI-assisted diagnostic technology, which supports clinicians in identifying pathology and monitoring areas requiring ongoing review in paediatric patients from as young as four years of age. Earlier identification of developing disease enables timely preventive intervention and minimally invasive treatment strategies, supporting improved long-term oral health outcomes.

By combining AI-assisted radiographic interpretation with child-centred patient communication, Second Opinion for Kids provides clinicians with a tool to support diagnosis, enhance patient education and improve acceptance of preventive treatment recommendations. The software is intended to strengthen communication, reduce treatment-related anxiety and encourage positive oral health behaviours from an early age.

KEEP WORKING HANDS CLEAN AND HEALTHY

Achieve correct hand hygiene outcomes with the help of Dentisan and its comprehensive product range that's designed to keep working hands clean and healthy.

To reduce the risk of infection transmission, DentiGel is a ready-to-use disinfectant that should be used following hand washing. Adding an extra layer of protection from pathogens in the dental practice, including coronaviruses, its effective formula contains emollients and skin conditioners that moisturise the hands, preventing soreness and irritation.

An excellent ally during a busy workflow, DentiGel is quick drying and easy to dispense. It also comes with the Dentisan stamp of approval: DentiGel complies with BS EN 1500 (European hand sanitiser standards) and is HTM 01-05 compliant.

Available in 500 ml pump dispensers, DentiGel can also be bought in 800 ml pouches for use with a touchless dispenser – this is an effective way to ensure the correct amount of DentiGel is released.

Discover how DentiGel and the rest of the Dentisan product range can enhance the standard of infection control in your practice today.

ASSURED WATER QUALITY

Join the Dentisan Clean Water Club for a more efficient way of managing your dental unit water lines (DUWLs).

The process is simple: use Bioclear Biological Dip Slides to identify microbial contamination, upload an image of the tested dip slide to the Clean Water Club portal, and await a report from Dentisan's in-house lab technicians.

Supporting ease of use and ensuring excellent infection control outcomes, members of the Clean Water Club can stay compliant, with dip slide deliveries serving as a reminder to conduct DUWL testing. Pass or fail reports are issued by the Dentisan team

to keep practices on top of their paperwork too.

A free service that also offers up to 30% off Dentisan waterline contamination solutions, the Clean Water Club is a reliable way to maintain the water quality of your dental units and better protect patients and fellow members of the dental team – join today.
