Correction: Impacts of land system change–driven urban heat islands on surface water dynamics and moisture conditions in Gauteng Province, South Africa

Tamiranashe Kuwaza¹, Paidamwoyo Mhangara¹ and Eskinder Gidey^{1,2*}

Correction: *Computational Urban Science* 6, 54 (2026)
<https://doi.org/10.1007/s43762-026-00290-5>

After publication of the article [1], it was brought to our attention that Eq. 1 was published incorrectly.

The incorrect Eq. 1:

$$\hat{y}(x) = \text{mode} \{T_1(x), T_2(x), \dots, T_N(x)\}$$

The correct Eq. 1:

$$\hat{y}(x) = \text{mode} \{T_1(x), T_2(x), \dots, T_N(x)\}$$

where $\hat{y}(x)$ is the final predicted land cover class, $T_i(x)$ is the class predicted by the i^{th} decision tree, and N is the number of trees in the forest.

Additionally, one word in Sect. 3.3 Impacts of heat-waves and urban heat islands on surface water resources on page 17 should be modified, listed as follows:

Corrected full statement:

This could be due to urban expansion with the addition of anthropogenic blue spaces or sensors picking up shallow water bodies, indicating a possible increase in the MNDWI.

The original publication has been updated.
