Correction to:

Hydrobiologia (2024) 851:3433–3452

<https://doi.org/10.1007/s10750-024-05508-3>

In the above-mentioned publication, calculated fluxes of nutrients (N-NH_4^+ , N-NO_x^- , DIN and P-PO_4^{3-}) were tenfold lower than they should be. This is a careless error made during the conversion of fluxes measured per cm^2 of column to fluxes per m^2 of sediment surface (a multiplication per 1000 was applied while it would have been a multiplication per 10,000). This calculation error led to several errors in the paper. Although it does not modify the comparisons of fluxes among tested sediments and oxygen treatments, the flux values presented in the text and displayed on two figures are erroneous.

The corrections needed in the text are as follows:

Page 3442, line 12, first column: “3.98 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “39.8 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3442, line 13, first column: “8.38 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “83.8 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3442, line 14, first column: “5.99 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “59.9 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3442, line 4, second column: “0.4 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “4.0 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3442, line 5, second column: “2.57 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “25.7 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3443, line 4, second column: “2.42 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “24.2 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3443, line 6, second column: “0.69 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “6.9 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3443, line 7, second column: “0.95 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “9.5 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Page 3446, line 21 of the paragraph, first column: “between 3.9 and 8.4 $\text{mg day}^{-1} \text{m}^{-2}$ ” should be “between 39 and 84 $\text{mg day}^{-1} \text{m}^{-2}$ ”.

Based on these corrections, we also need to correct a sentence in the discussion comparing the fluxes observed in the present experiment and literature data:

Page 3446, lines 23–27 of the paragraph, first column: “These results were comparable to release rates of NH_4^+ in meso/eutrophic lakes (between 5.5 and 10 $\text{mg day}^{-1} \text{m}^{-2}$) measured under anoxic conditions, while they were negligible in oxic conditions (Beutel, 2006).” should be replaced with “These results were markedly higher than release rates of NH_4^+ measured under anoxic conditions in meso/eutrophic lakes (between 5.5 and 10 $\text{mg day}^{-1} \text{m}^{-2}$) (Beutel, 2006),

Fig. 4 Release rates of N-NH_4^+ (A), N-NO_x^- (B), DIN (C), and P-PO_4^{3-} (D) from the sediment to the water column for the three oxygen and sediment treatments (mean $\pm$ standard error, $N=3$). For each panel, different symbols (#, \$ and α) show significant differences among treatments (see axis label, Tukey

post hoc test, $P < 0.05$). Release rate of P-PO_4^{3-} in the anoxic treatment was calculated at day 13 for Puyvalador under anoxic conditions due to an analytical problem for this measurement at day 15

Fig. 6 Regression analyses showing the adjustment of measured release rates of DIN and P-PO_4^{3-} in anoxic and oxic conditions predicted from the percentage of particles < 63 μm in the three sediments

indicating the high potential of reservoir sediments to produce eutrophication issues.”

The values displayed on the *Y*-axes of Figs. 4 and 6 were also tenfold lower than they should be. After correction, these two figures are as shown here.
